

ITMI Workshop

ACPFG Genomics Symposium

Molecular genetics, genomics and genetic analysis in the Triticeae...
Wheat, barley, rye and their wild relatives

McCracken Country Club, South Australia • 28th – 31st August 2006

The symposium will be on the general topic of genomics in the Triticeae:

- Core collections: germplasm markers and phenotypes
- Recombinational analysis: linkage maps, marker trait associations, QTL and mapping populations
- Physical analysis: long range sequencing and physical maps
- Expression profiling: transcriptomics, proteomics and metabolomics
- Functional analysis: transient and stable transformation and related techniques
- Bioinformatics
- Applied genomics
